## SafeStat Calculation

$$\text{SafeStat Score} = 2 \times \text{Accident SEA Value} + 1.5 \times \text{Driver SEA Value} + \text{Vehicle SEA Value} + \text{Safety Management SEA Value}$$

*	*	Insuf. Data	Insuf. Data	Insuf. Data
---	---	-------------	-------------	-------------

SafeStat calculates a SafeStat score to rank carriers in descending order by their safety status (i.e. a carrier with the highest SafeStat score is the first ranked carrier in terms of poor safety status). SafeStat does not assign SafeStat scores to all carriers. To obtain a SafeStat Score, a carrier must be deficient in at least **two different Safety Evaluation Areas (SEAs)**. SEA values range from 0 (best) to 100 (worst). A SEA with a value from 75 to 100 is defined as deficient (highlighted in **BOLD** type). SEA Values that are less than 75 are not used in the calculation of a SafeStat Score.

**CAUTION:** Please verify [important data](#) before relying on SafeStat results. Inaccurate or out-of-date normalizing data can result in SafeStat results that do not accurately reflect the motor carrier's safety status.
